POLICY

ON INFORMATION SECURITY MANAGEMENT SYSTEM

OF „ABB POWER GRIDS BULGARIA EOOD“

The Information Security Management System (ISMS) as part of the ABB Power Grids Bulgaria EOOD Integrated Management System includes a framework that clearly defines the goals and principles of information security while creating clear criteria for analysis and risk assessment.

ISMS is consistent with all the business, legal, technological, technical and tactical requirements of the processes to achieve the necessary level of trust, contractual obligations to ensure security and meet the strategic context of risk management in the Organization.

THE MANAGEMENT ON BEHALF OF THE GENERAL MANAGER:

- Officially declares this SECURITY POLICY, which is publicized, distributed, understood, implemented, and maintained at all levels within the Organization;

- Officially declares that the primary purpose of the Organization and all staff is to build trust by providing its customers, partners and stakeholders with a product that meets their security requirements, while ensuring confidentiality, integrity and accessibility of information assets providing the processes of: “Marketing and sales of high voltage systems, components and products. Design and project management related to high voltage networks and systems, automation and automation systems, intelligent systems and networks. Management of the processes of maintenance and maintenance of renewable energy plants.”

- Accepts and bears the personal responsibility for the periodic review and updating of the Policy with a view to its adequacy and continuous improvement, this process being based only on verified facts in decision making;

- Has the obligation to identify all security processes in the Organization and confirm that they are under controlled conditions.

- Clearly defines the security of information, its goals, areas and levels of importance as a mechanism for providing and / or using the information. On this basis, the Organization plans effective control mechanisms that ensures the achievement of the objectives set and are based on the basic principles of information security.

- Declares that a major priority for the Organization is the identification of all risks to assets, processes, products, interests of customers, suppliers, partners and stakeholders; analyzing and evaluating them; the implementation of effective risk reduction plans; the selection and implementation of appropriate security controls, as well as the evaluation of the effectiveness of the objectives and control mechanisms applied, using this to improve security, ensure a process of continuity of work and improve the Integrated Quality and Security Management System.

- Continuous study and implementation of the latest scientific and technological developments in the field of security in the Organization.

- It strives to provide 100% security of all processes.

- Is aware of its leading role in formulating security objectives and monitor their implementation through effective control mechanisms.

- Directs its efforts in the following areas for the effective implementation of the INFORMATION SECURITY POLICY:

  - implementation of effective security policies and creation of conditions for continuous management of processes in the Organization;
